PROFESSIONAL SUMMARY

Senior Flutter engineer and architect with 6 years shipping production apps on iOS, Android and Web. I build foundations that scale, such as a company-wide design system and a 100k+ LOC modernization, solve hard delivery problems like 1.5 GB Flutter Web uploads and real-time Bluetooth, and own features end to end across mobile, web, backend and AI.

PROFESSIONAL EXPERIENCE

Flutter Architect & Senior Frontend Developer — **Keel Mind** Jan 2022 – Jul 2026

Remote | Toronto, Canada | Multi-tenant mental-health platform (Keel Digital Solutions; product formerly Get A-Head Inc.)

Jan 2022 – Aug 2024 via Band of Coders LLC (employer of record); Sep 2024 – Jul 2026 direct B2B contract after Keel Mind bought out the engagement. Same product and team throughout.

- **One design system for every Flutter app in the company:** architected km_fl_common_ui with an override-ready color architecture, so each white-label tenant gets its own branding without forking code.
- **Removed ~6,500 lines of generated code from a 100k+ LOC app** by leading the migration of 126 models and ~217 BLoC files from Freezed to Equatable and Dart 3 sealed classes, dropping the codegen dependency.
- **Made 1.5 GB uploads work in Flutter Web:** native XHR/Blob instead of the HTTP client, with bytes staged in IndexedDB so the Dart heap never holds the file, plus per-file progress, cancellation and virus-scan polling.
- **Built the real-time voice pipeline of GuardianAI,** a production voice-AI agent (React 19, TypeScript): gapless audio playback, a typed WebSocket protocol with auto-reconnect, and voice-activity detection (Silero/ONNX) so users can interrupt the agent naturally. Shipped as an embeddable SDK; live at app.npsn.org.
- **Delivered Pressio end to end:** the full MVP of a transcript-analysis product (React 19, TypeScript, Fastify on AWS Bedrock), handed over production-ready with tests and OpenAPI docs.
- Also: an embeddable Flutter package for voice-based self-assessment with native audio on Web, iOS and Android; a voice-biomarker pipeline across Flutter, Python and Node; CI/CD to GCP Cloud Run; team engineering standards; and mentoring of 2+ developers.

Flutter Developer — **Band of Coders LLC** Feb 2021 – Jan 2022

Remote | Atlanta, GA, USA | Software agency

- **Built GoTribe Fitness from scratch, live on both stores:** athletes' Bluetooth (BLE) heart-rate sensors stream to their phones, and trainers follow the whole class live through GraphQL subscriptions, since Bluetooth alone can't cover a room of 20+ devices.
- Delivered Flutter projects for US clients with BLoC and Riverpod; from Jan 2022 placed full-time with Get A-Head Inc. (now Keel Mind).

Flutter Developer — **Native App** Jul 2020 – Jan 2021

Remote | Bogotá, Colombia

- Built the reusable widget library behind a no-code app builder, plus Web, PWA, iOS and Android modules with BLoC, Firestore and Cloud Functions.

PROJECTS

Founder & Lead Engineer — **Foodly World** Jan 2024 – Present

Own product | Restaurant platform: digital menus, reservations, table ordering and split payments | Live on App Store and Google Play | foodly.solutions

- **Cut Google API calls by 60–80%** with my own geospatial search (Haversine with SQL bounding-box pre-filtering) and a cached Places/Geocoding proxy.
- **Made live table ordering hold up in a real dining room:** simultaneous orders from one table merged under a database lock, ownership checks closed across 16 controllers, and the restaurant panel cut from 309 to 15 queries, guarded by query-count tests.
- **Took over a backend that wasn't production-ready and hardened it:** GCP infrastructure, security remediation, Cloudflare, SMS two-factor auth and push notifications.

- Flutter (BLoC, go_router, GetIt) on a Laravel / PostgreSQL API on Cloud Run, with Stripe Connect split payments, Shorebird OTA patching, menu digitization from photos and an AI promo generator.

Freelance Full-Stack Engineer — **Apps 369 — WenekaTón** Sep 2026 – Oct 2026

Client project | Tour operator to Angel Falls, Venezuela: a Spanish-only owner serving guests in four languages | wenekaton.com

- **Built wenekaton.com,** a four-language booking site (English, Spanish, Portuguese, German) with Astro, TypeScript and Tailwind CSS on Cloudflare Workers.
- **Added an AI assistant (Claude API)** that answers guests only from the site's own catalog data, so it never contradicts published prices, and hands bookings, quotes and complaints to a person.
- **Let the owner answer every guest in their own language:** web chat and email merged into one inbox (Cloudflare D1 and Email Routing), with translation both ways and AI-drafted replies in Spanish.

Founder & Engineer — **Votiva** Sep 2026 – Present

Own product | AI prayer companion for iOS and Android, in Spanish, English and Portuguese; subscription with free trial | In App Store and Google Play review

- **Turns a personal intention into a guided prayer** with Bible verses and narrated audio: Flutter (Cubits with sealed states, get_it) on a FastAPI backend on Cloud Run. Chose Claude Sonnet over Haiku by running an eval set (20/20 vs 17/20).
- **Protected a paid AI service:** Firebase Auth and App Check verified server-side, per-person and global daily quotas in Firestore, and RevenueCat subscriptions after three free prayers.
- **Handled faith data as GDPR special-category data:** user text is never logged and the person prayed for is never sent to the model; accessibility (contrast, screen-reader semantics) is enforced by tests.

TECHNICAL SKILLS

Flutter & Dart: Flutter, Dart, Flutter Web, go_router, Retrofit, Dio, Hive, Material 3, CustomPainter, animations, platform channels, Bluetooth Low Energy (BLE), responsive and adaptive UI

State Management & Architecture: BLoC, Cubit, Provider, Riverpod, GetIt, Clean Architecture, MVVM, Repository pattern, design systems

Languages: Dart, TypeScript, JavaScript, Python, PHP, SQL

Web & Frontend: React 19, Next.js, Astro, Vite, Tailwind CSS, Web Audio API, WebSocket

Backend & Data: Laravel, FastAPI, Node.js, Express, Fastify, REST, GraphQL, PostgreSQL, Redis, Firebase, Firestore, Stripe, RevenueCat

Cloud & DevOps: GCP (Cloud Run, Cloud SQL, Cloud Storage), AWS (Bedrock, SageMaker, S3), Cloudflare (Workers, D1), Docker, GitHub Actions, CI/CD, Vercel

Mobile Release: App Store Connect, TestFlight, Google Play Console, Shorebird OTA, Fastlane

AI / ML: Claude API, structured outputs, prompt caching, LLM evals, voice AI agents, voice-activity detection (Silero, ONNX), AWS Bedrock, LangChain, NLP

AI-Assisted Development: Claude agents, GitHub Copilot, AI-assisted code review and test generation

Testing & Quality: bloc_test, mocktail, Vitest, Testing Library, unit, widget and integration testing, CVE remediation

EDUCATION & CERTIFICATIONS

Self-taught software engineer — continuous professional training, 2019–2021

- **Flutter & Dart:** Advanced Flutter: BLoC, Cubit, Provider, real-time sockets, in-app payments (Udemy, 2021); Flutter Complete iOS & Android Development (Udemy, 2020); Flutter Professional UI & Animations (Udemy, 2020); Flutter Developer track: Dart, Firebase, SQLite, Google Maps (CódigoFacilito, 2020)
- **Web & Backend:** React Expert Level: hooks, Redux, MERN, Jest, React Testing Library (Udemy, 2020); Professional Python Programming (CódigoFacilito, 2020); SQL Professional Database Design (Udemy, 2020); Microservices and Angular (LinkedIn, 2020)
- **Methods & Data:** Agile & Scrum in Depth, PSM I preparation (Udemy, 2021); Microsoft Power BI (Udemy, 2020)
- **Software Development track** (Platzi, 2019–2021)

LANGUAGES

Spanish (Native) | **English** (Advanced, C1) | **Portuguese** (Intermediate)
